

1

ABSTRACT OF THE DISCLOSURE

2 The present invention is directed to novel alkylated aromatic compositions,
3 zeolite catalyst compositions and processes for making the same. The
4 catalyst compositions comprise zeolite Y and mordenite zeolite having a
5 controlled macropore structure. The present invention is also directed to the
6 preparation of the catalyst compositions and their use in the preparation of
7 novel alkylated aromatic compositions. The catalyst compositions of the
8 present invention exhibit reduced deactivation rates during the alkylation
9 process, thereby increasing the life of the catalysts.
